SUMMARY

Two years of building websites for media buying teams on Google Ads and Meta, taking each site from a reference and a short brief to a finished build. 300+ projects for Tier-1 and Tier-2 markets in 10 languages, from single white pages and landers to 8–20 page sites. Each site is built to meet Google Ads certification requirements and policies and to avoid compromised-site flags.

WORK EXPERIENCE

Frontend Developer · Affiliate marketing team (NDA) — Jan 2026 – Present

- Build 8–20 page sites for media buyers from a reference and a few lines of brief, usually with minor revisions; 100+ delivered.
- Typical turnaround is 3–12 hours per site, depending on complexity: layout, design, content, visuals and QA, using reusable components and the AI workflow below.
- Keep sites in one network visually distinct with a curated base of references and design systems; HTML, SCSS (BEM), vanilla JS and PHP templates, with animations, sliders, modals, no-reload forms and mini-games.
- Technical SEO and compliance for each market: meta tags, structured data, sitemaps, internal linking, cookie consent, legal pages, Google Ads policies; deploy to test and production servers (RunCloud).
- Prepare visuals from stock photos and AI tools, with text set in the site's fonts; optimize images for the web (WebP, srcset).
- Built and keep refining the AI-agent workflow behind this pace: a knowledge base of rules and references, automated runs for simple sites and step-by-step work on complex ones, a cross-check against the requirements by a second agent, and my own review of layout, functionality and responsiveness before handoff.

Frontend Developer · Media buying team (NDA) — Dec 2025 – Mar 2026

- About 200 white pages and landers for Tier-1 markets in four months, up to 9 simple ones a day through automated agent runs with manual checks; complex landers built step by step with a detailed review.
- Researched and reworked existing landers, adapting them to new offers and markets without breaking their architecture.
- Worked in a Scrum process with the team lead, media buyers, DevOps and other developers. Reference letter from the Technical Director.

Web Designer & Frontend Developer · TraffBro — Dec 2024 – Nov 2025

- Built 120+ landing pages, prelanders and sites for affiliate offers.
- Designed and coded pages to technical specs and Google Ads requirements, or recreated them from reference sites.
- Built custom WordPress themes, deployed sites, set up routing and fixed WordPress issues; built bilingual sites.
- Optimized pages for mobile, cross-browser behavior, SEO and speed; worked with media buyers and the rest of the team; learned how offers, funnels and campaigns work.

PROJECTS

Portfolio — 8 multi-page white-page sites (EN, DE, PT, EL) from production work, rewritten and redesigned so no client material is shown (NDA); incl. a portal with five JS browser games. More work on request · [link]

Nice Gadgets — online store: catalog, product pages, cart, favorites · React, TypeScript, React Router, SCSS modules · Demo · GitHub

2048 — the classic puzzle game in vanilla JavaScript · Demo · GitHub

Landing page — responsive landing from a Figma design · HTML, SCSS, BEM · Demo · GitHub

Earlier — Users App, test task (React, Redux Toolkit) · Marvel, React app on a public API · Parts, Laravel store · GitHub

SKILLS

Frontend: HTML5, CSS3, SCSS, BEM, Flexbox/Grid, responsive layout, JavaScript (ES6+), TypeScript, React, Redux Toolkit, React Router

Backend & CMS: PHP (templating), WordPress; MySQL, Laravel (familiar)

Media buying: core principles and workflow of affiliate media buying; Google Ads certification requirements and policies, compromised-site triggers, live search analysis, ad accounts, traffic filtering, Meta Ads

AI: Claude Code, Codex, ChatGPT, Google AI Studio, DaVinci

Tools: Git, GitHub, Figma, Chrome DevTools, Lighthouse, Vite, npm, RunCloud, Cloudflare, Obsidian

EDUCATION

Mate Academy — Frontend Developer program

Online courses — HTML/CSS, JavaScript, React

Khmelnytskyi National University — Bachelor of Computer Science, 2021 – 2025; thesis: aircraft detection in satellite imagery (YOLO)
